

Secure File Sharing Between Cloud Instances using AWS EC2

Step 1: Login to AWS

Open AWS Console and go to EC2 Dashboard.

Step 2: Create Key Pair

1. Open EC2 Dashboard
2. Click Key Pairs
3. Click Create Key Pair
4. Name: cloudkey
5. Type: RSA
6. Download cloudkey.pem

Step 3: Launch Sender EC2

Name: Sender-Instance
AMI: Amazon Linux
Instance Type: t3.micro
Key Pair: cloudkey
Allow SSH Traffic: Enabled

Step 4: Launch Receiver EC2

Name: Receiver-Instance
AMI: Amazon Linux
Instance Type: t3.micro
Key Pair: cloudkey
Allow SSH Traffic: Enabled

Step 5: Connect to Sender EC2

AWS Console → Sender Instance → Connect → EC2 Instance Connect

Step 6: Create File

Run in Sender EC2 Browser Terminal

Command

```
echo "Secure file transfer using AWS EC2" > file.txt
```

Check File

```
cat file.txt
```

Step 7: Upload PEM Key

Run in YOUR SYSTEM TERMINAL
(Open Downloads Folder → Right Click → Open in Terminal)

Command

```
scp -i cloudkey.pem cloudkey.pem ec2-user@SENDER-PUBLIC-IP:/home/ec2-user/
```

If Asked

Type: yes

Step 8: Set Permissions

Run in Sender EC2 Browser Terminal

Commands

```
chmod 400 cloudkey.pem  
chmod 600 file.txt
```

Step 9: Copy Receiver Private IP

AWS Console → Receiver Instance → Copy Private IPv4 Address

Step 10: Transfer File Securely

Run in Sender EC2 Browser Terminal

Command

```
scp -i cloudkey.pem file.txt ec2-user@RECEIVER-PRIVATE-IP:/home/ec2-user/
```

Step 11: Verify File

Open Receiver EC2 Browser Terminal

Commands

```
ls  
cat file.txt
```

Expected Output

Secure file transfer using AWS EC2

Security Features

- SSH Secure Communication
- SCP Encrypted File Transfer
- Key Pair Authentication
- Private IP Communication Inside VPC
- File Permission Security

Conclusion

Successfully created secure communication and secure file sharing between two AWS EC2 instances using SSH and S
