

AWS Assignment 1: Deploy Static Website

Step 1: Configure Instance

- Name: StaticWebsite
- AMI: Amazon Linux 2023 (default)
- Instance Type: t3.micro
- Use existing .pem key

Step 2: Configure Security Group

- Click Edit
- Add security group rules:
- SSH → Anywhere
- HTTP → Anywhere
- HTTPS → Anywhere

Type	Port	Source
SSH	22	Anywhere
HTTP	80	Anywhere
HTTPS	443	Anywhere

Step 3: Launch Instance

Click: Launch Instance

Step 4: View All Instances

Go to: EC2 Dashboard → Instances

Step 5: Copy Public IPv4 Address

Copy the Public IPv4 Address

Step 6: Select and Connect

- Select instance
- Click Connect
- Choose EC2 Instance Connect
- Click Connect

Step 7: Update Amazon Linux (Optional)

```
sudo yum update -y
```

Step 8: Install Apache Web Server

```
sudo yum install httpd -y
sudo systemctl start httpd
sudo systemctl enable httpd
sudo systemctl status httpd
```

Step 9: Test Public Access

```
http://YOUR_PUBLIC_IP
```

Step 10: Create Static Website

```
cd /var/www/html
sudo nano index.html
```

```
<!DOCTYPE html>
<html>
<head>
<title>AWS Static Website</title>
<style>
body{
    background-color:#f2f2f2;
    text-align:center;
    margin-top:100px;
    font-family:Arial;
}
h1{
    color:blue;
}
</style>
</head>
<body>
<h1>Welcome to My AWS EC2 Website</h1>
<p>Static website hosted successfully using Amazon Linux.</p>
</body>
</html>
```

Save:

- CTRL + O
- Enter
- CTRL + X

Final Step

Open:

`http://YOUR_PUBLIC_IP`

Result

Static website successfully deployed on AWS EC2 instance and made publicly accessible using the public IPv4 address.
