

Assignment 22: Visualforce Email Notification System with Validation

Step 1: Create Apex Controller Class

Go to: **Setup** → **Quick Find** → **Apex Classes** → **New**

Class Name:

Paste this code:

```
public class EmailController {

    public String toEmail {get; set;}
    public String subject {get; set;}
    public String body {get; set;}

    public PageReference sendEmail() {

        if(toEmail == null || !toEmail.contains('@')) {
            ApexPages.addMessage(
                new ApexPages.Message(
                    ApexPages.Severity.ERROR,
                    'Enter valid email address'
                )
            );
            return null;
        }

        Messaging.SingleEmailMessage mail =
            new Messaging.SingleEmailMessage();

        mail.setToAddresses(new String[] {toEmail});
        mail.setSubject(subject);
        mail.setPlainTextBody(body);

        Messaging.sendEmail(
            new Messaging.SingleEmailMessage[] {mail}
        );

        ApexPages.addMessage(
            new ApexPages.Message(
                ApexPages.Severity.CONFIRM,
                'Email sent successfully'
            )
        );
    }
}
```

```
        return null;
    }
}
```

Click **Save**.

Step 2: Create Visualforce Page

Go to: **Setup** → **Quick Find** → **Visualforce Pages** → **New**

Page Name:

Paste this code:

```
<apex:page controller="EmailController">

    <apex:form>

        <apex:pageMessages/>

        <apex:pageBlock title="Email Notification System">

            <apex:pageBlockSection columns="1">

                <apex:inputText value="{!toEmail}" label="Recipient Email"/>

                <apex:inputText value="{!subject}" label="Subject"/>

                <apex:inputTextarea value="{!body}" label="Message"/>

            </apex:pageBlockSection>

            <apex:commandButton value="Send Email"
                                action="{!sendEmail}"/>

        </apex:pageBlock>

    </apex:form>

</apex:page>
```

Click **Save**.

Step 3: Run Application

Open Visualforce page preview.

Enter:

- Recipient Email
- Subject
- Message Body

Click: **Send Email**

Step 4: Invalid Email Test

Example invalid email:

abcmail.com

Output:

Enter valid email address

Step 5: Valid Email Test

Example:

abc@gmail.com

Output:

Email sent successfully

Recipient receives email.

Viva Points

- Visualforce provides frontend UI.
- Apex controller handles backend logic.
- `Messaging.SingleEmailMessage` sends email.
- `setToAddresses()` sets recipient.
- `setSubject()` sets subject.
- `setPlainTextBody()` sets message body.
- `ApexPages.addMessage()` shows success/error messages.
- `contains('@')` validates email format.
